

Aviation Environments Test Engineering Branch (DRB)

Provides mechanical and electrical test engineering support to the Center's aeropropulsion projects in the Icing Research Tunnel, the Aero and Acoustic Propulsion Lab, and the Engine Research Building. Support includes: assurance of operational test facilities; test planning; project management to prepare the research article for testing; integration of the research hardware into the test facility; operation of the test facility, including calibrations; development or incorporation of new test technologies; data validation and analysis; and delivery of data to the customer.
